## ETI Converting Equipment At Label Expo Asia 2007

Source: ETI Converting Equipment, 2007-Oct-21

After the sale of the Cohesio technology for the manufacturing of self-adhesive material for beer label in China, ETI Converting Equipment maintains its growth in Asia.

In August 2007, a new plant in the Shanghai area has been set-up by the company to supply the increasing need on high-end printing and coating technology for label printers.

At Label Expo Asia, ETI will present the Cohesio narrow web coating technology. The Cohesio machine is a coating equipment manufactured for label printers. The technology applies silicone and adhesive on any face stock and release liner in order to produce self-adhesive material. Label printers can now benefit from 30% to 70% savings on their self-adhesive material with the Cohesio from ETI Converting. The Metronome, ETI's high-end flexo printing equipment will also be exhibited.

Visit us at Label Expo Asia 2007, booth B6. <http://www.eticonverting.com>

### **ETI Converting Equipment to host technology users conference**

Next March, in Barcelona, Spain, the first conference of the ETI Users Group will take place. This non-profit organization will regroup ETI users to exchange and share commercial and technical information on products made by ETI equipment, an in-line silicone and adhesive coating machine, for which ETI Converting Equipment obtained a patent in April 2005.

The goal of the conference is to increase and accelerate the presence of ETI manufactured labels on the market place. The ETI users will join forces to answer the increase demand for differentiated and cost effective labels requested by the major end users and by the market in general.

More than 20 companies around the world, evolving in different markets (wine, beverages, cosmetics, food) will participate in the two-day conference.

## "ETI Converting Equipment" First Technology Users Conference

Source: ETI Converting Equipment, 2007-Feb-02

Boucherville, February 1st, 2007 - Next March, in Barcelona, Spain, the first conference of the "ETI Users Group" will take place. This non-profit organization will regroup ETI users to exchange and share commercial and technical information on products made by ETI equipment, an in-line silicone and adhesive coating machine, for which ETI Converting Equipment obtained a patent in April 2005.

The goal of the conference is to increase and accelerate the presence of "ETI manufactured labels" on the market place. The ETI users will join forces to answer the increase demand for differentiated and cost effective labels requested by the major end users and by the market in general.

More than 20 companies, around the world, evolving in different markets (wine, beverages, cosmetics, food) will participate in the 2 day conference. Other VIP will also be present.

By working as a team, the members will be able to get the best out of the bi-annual conferences, video conferences, news letters and interactive web sites that the organization will have to offer.
