## Cohesio

ETI Converting Equipment, specialized in the conception of label manufacturing equipment, is celebrating its 10th year of operation! In 2000, ETI introduced the innovative Cohesio to provide an exclusive possibility to label printers to produce their own pressure-sensitive labelstock.

Over the past 10 years, the Cohesio has helped companies to generate huge savings in the label production process. It features unique technological solutions that allow you to create new products, reduce printing waste, and save 30% to 70% on your pressure sensitive material costs.

Cohesio is able to supply your needs to produce all your pressure sensitive material or complete self-adhesive label from raw material. Both produced at a lower cost. During the last year, the R&D department of ETI has improved the Cohesio technology with many new application possibilities, such as wet-wipes,

wash-off, specialty tapes, baggage tags and others. The team has also develop relationship with new suppliers for more aggressive pricing on raw materials like semi-gloss, direct thermal, glassine, BOPP, PET and others. Cohesio Linerless is specially designed to produce linerless including direct thermal linerless.

## Cohesio Linerless

If you just want to coat and cure silicone we can offer you our new silicon coater named Silicoat. This machine is perfectly suited to siliconize glassine, PET or any other type of material. It is very compact and equipped with ETI UV curing system in nitrogen chamber. Silicoat can be used for laboratory or for in-house production.

## Silicoat

## Metronome Combo

You can always improve and diversify your label printing process with our Metronome combination press (flexo & gravure stations). The advantages of gravure printing include high quality silver printing, special adhesive applications, high quality opaque white color printing, and printing on thin films.

When thinking about environmentally friendly equipment, we are glad to present ETI's flexo printing press Metronome with short pass printing (SWP). The advantages of having a shorter web pass are to drastically reduce the setup time as well as the waste during set-up and printing.
