

Latest innovations and technologies

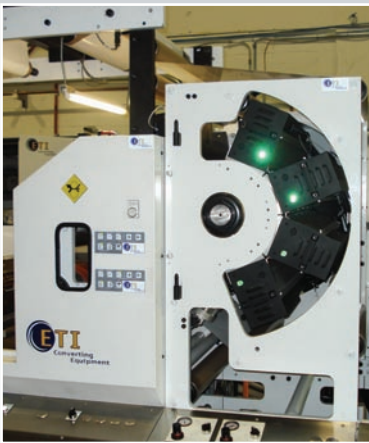

ETI-CUT

ETI Converting's die-cutting solution, the ETICUT is a patented technology that uses a single magnetic cylinder for any label format/repeat.

Advantages:

- ▶ *Precision*
- ▶ *High-speed (150mpm)*
- ▶ *Savings*
- ▶ *Accurate register*
- ▶ *No tooling change required*

Ideal as a finishing line for digital equipment, the ETICUT reaches speeds 5 times faster than competing equipment and eliminates costs of tooling purchase.

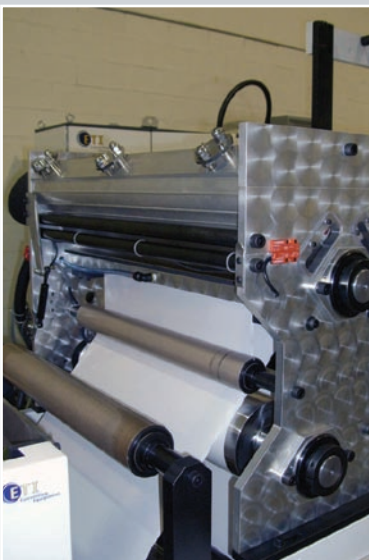

UV acrylic curing station

This system was designed to coat and cure acrylic UV curable pressure sensitive hotmelt adhesives. These adhesive combines the easy handling and coating properties of hotmelt with the clean removability and other properties of acrylics.

Advantages:

- ▶ *Resistance to plasticizers*
- ▶ *Resistance to high heat*
- ▶ *Resistance to humidity*
- ▶ *Removability from various substrates*
- ▶ *Adhesion on difficult substrates*

ETI CORONA PLASMA OPTIMUM

The ETI-Corona Plasma Optimum improves the anchorage of ink, adhesive, or any other coating on the substrate. This system replaces the need to buy films already pre-treated by traditional film suppliers, thus reducing your purchasing cost.

Advantages:

- ▶ *Improves ink anchorage on low surface energy film thus enabling UV printing on inexpensive film*
- ▶ *Small construction easily retrofitted*
- ▶ *Operates at a speed of 150 m/min*
- ▶ *Easy to open, easy to operate, and electrodes are easily cleaned*
- ▶ *No degradation over time*
- ▶ *Environmentally friendly reduction of the use of solvents and lacquers*
- ▶ *Reduction of cost: No need to buy expensive treated films*
